Mira Chami

Software Engineer

London, UK · +44-7495468016 · miranchami@gmail.com · mirachami.dev

Software engineer building desktop applications, game systems and applied AI tools, with ownership of React application architecture, Rust/native integration, cross-platform delivery and automated validation.

PROFESSIONAL EXPERIENCE

Tencent

Nov 2023 - Present

Game Tech R&D Engineer · London, UK

Desktop AI Companion

React, JavaScript, Tauri, Rust

- Architected a React/Rust desktop AI companion client for conversation and game assistance; evaluated Electron and migrated to Tauri v2. Implemented client-to-server AI integration, including prompt submission, HTTP/SSE response streaming, progressive reply rendering and persistent chat history.
- Built full-chat, lightweight companion, avatar and settings UI with shared window messaging, overlays, hotkeys and tray access; integrated gRPC, Three.js and PixiJS.
- Configured and modified CI pipelines for automated Windows/macOS builds and packaging; built diagnostic panels and structured logging, and made Steam integration optional with feature flags.

Investigative Game & Applied AI

Godot, Gemini, Node.js

- Implemented a Godot investigation game prototype where players review case files, connect evidence on a board and question AI witnesses. Built case-file, witness-interview and evidence-board interfaces, letting players pin evidence cards to a board and open the supporting source text.
- Built Gemini/Search-grounded LLM research with versioned source/evidence/witness/narrative packages, JSON Schemas, citation/cross-reference checks and a comparison viewer. Added knowledge-constrained AI character dialogue, evidence-based questions, verified/revised replies and source-attributed clues.
- Built Node.js/Express services with session restoration, caching, validation and timeouts/cancellation/retries; automated schema/data-integrity and Godot UI tests across viewports using mocked responses to validate flows without live model calls.

InGame Integration & Multiplayer Demo

UE5, C++, Blueprints

- Built a UE5 multiplayer demo to demonstrate and validate InGame, Tencent's public online-service framework. Implemented replicated gameplay and UI, and integrated authentication, lobbies, matchmaking, quests, inventory and achievements.
- Enabled PlayStation 5 support and local dedicated-server debugging in Unreal Editor to reproduce partner issues; configured and modified CI pipelines and supported gameplay, UI, plugin and backend integration.

Extraction Game & Applied AI

Godot, GDScript

- Built a Godot co-op extraction prototype with authoritative Steam P2P/LAN multiplayer and UI, listen/dedicated servers, replication, RPCs, sessions and multi-client tests. Made Godot co-op objectives, death/revival, map progression, currency, rewards and win/loss conditions configurable.
- Built a validated action library for an LLM to execute in-game actions: spawning encounters, granting rewards and changing progression. Exposed shared events and entity context; built timeline/editor tools to author, preview and validate typed actions.
- Investigated slow procedural generation and low frame rates using Godot's profiler, identifying CPU-bound bottlenecks.

PROFESSIONAL EXPERIENCE (CONTINUED)

The Video Games Studio (VGS)

June 2020 - Aug 2022

Game Programmer · Beirut, Lebanon

- Implemented user interfaces and integrated PlayFab, third-party plugins and backend services across Unity projects. Used ScriptableObjects to configure difficulty, progression and shop content.
- Developed and released a mobile runner in Unity, implementing gameplay, difficulty balancing, PlayFab competitions and monetisation; built tooling to manage competition cycles and retrieve winner data.
- Designed gameplay architecture for a published Unity puzzle game, including adventure and drawing modes, level progression, persistence and saving and replaying player-created content.
- Led programming for a Unity adventure prototype, translating game design specifications into character, ability and interaction systems; implemented touch controls and collaborated with level designers.
- Supported technical interviews, developer onboarding and mentoring, code reviews and task planning in Jira and Trello. Contributed to game design documents and maintained gameplay and software architecture documentation.

TECHNICAL TOOLKIT

PROGRAMMING
C++ · C# · Python · TypeScript · Rust
JavaScript · GDScript · Java · C

ENGINES & DESKTOP
Unreal Engine 5 · Unity · Godot
React · Tauri · Electron

APPLIED AI
Gemini · LLM APIs · Search grounding
JSON Schemas · Response verification

SERVICES & NETWORKING
Node.js · Express · gRPC/Protobuf
InGame · PlayFab · Steamworks · Photon

UI & GRAPHICS
Three.js · PixiJS · Unity URP
Native desktop integration

BUILD & ENGINEERING
Git · Perforce · CI pipelines
Automated testing · Build/release automation
Performance profiling & optimisation

EDUCATION

MSc Games Development (Programming) · Kingston University London · 2022 - 2023

BSc Computer Sciences · American University of Beirut · 2017 - 2021

BA Economics · American University of Beirut · 2016 - 2020

MISCELLANEOUS

Languages: English (Native) · French (Native) · Arabic (Native)

Favourite games: Clair Obscur: Expedition 33 · Celeste · Split Fiction · The Last of Us · Outer Wilds
