Mira Chami

Gameplay Programmer

London, UK · +44 7495 468016 · miranchami@gmail.com · mirachami.dev

Gameplay programmer building multiplayer systems, player interactions and designer tools across Godot, Unreal Engine 5 and Unity. Shipped two mobile games, led programming on an adventure prototype and developed experimental gameplay driven by LLMs.

PROFESSIONAL EXPERIENCE

Tencent

Nov 2023 – Present

Game Tech R&D Engineer · London, UK

Co-op Extraction Game

Godot, GDScript

- Architected **server-authoritative co-op multiplayer** supporting Steam P2P, LAN, listen and dedicated servers, with replication, RPCs, session management and local multi-client testing.
- Built designer-configurable co-op runs and UI covering objectives, death and revival, node/map selection, currency, rewards and win/loss conditions.
- Built a timeline runtime and Godot editor plugin that designers used to create behaviour timelines for the AI director. It let them author, preview and validate behaviours without code using the same typed actions as the LLM director, so behaviours could be prototyped by hand before model integration.
- Built the gameplay interface for an LLM game director: a validated action library for spawning enemies, granting item rewards and changing progression through server-authoritative systems.
- Profiled procedural generation and frame-rate issues in Godot, identifying CPU-bound bottlenecks.

Multiplayer Demo & Online Services

UE5, C++, Blueprints

- Implemented replicated Free-for-All and Teams match flows in UE5 using C++ and Blueprints, covering character state, team rules, scoring, interactables and match transitions.
- Integrated InGame, Tencent's public online services framework, into a playable multiplayer demo to demonstrate and validate authentication, lobbies, matchmaking, quests, progression, inventory and achievements; owned the demo's UI.
- Implemented **PlayStation 5 support** and dedicated-server debugging in Unreal Editor; supported partner studios with gameplay, plugin and backend integration; modified CI pipelines.

Investigation Game

Godot, Gemini, Node.js

- Built the investigation loop connecting case files, an evidence board and AI witness interviews, with character-knowledge constraints and reply verification before presentation.
- Turned player choices into AI input: players pin up to three evidence cards and choose an intent (ask, challenge, connect) to build a question they review before sending. Owned the evidence-board, case-file and interview UI.
- Implemented session caching, timeouts, cancellation and retries for asynchronous interviews; Gemini/Search-grounded case generation with schema validation; and UI tests without live model calls, using mocked replies across screen sizes.

Desktop AI Companion

React, Rust, Tauri

- Owned the React/Rust architecture and UI for a desktop AI companion; led the Electron-to-Tauri evaluation with working prototypes and migrated to Tauri v2 for lightweight use alongside games.
- Built streaming AI chat over HTTP/SSE with progressive rendering across full-chat and in-game companion modes, with overlays, hotkeys, persistent history and automated Windows/macOS CI builds and packaging.

Gameplay Programmer · London, UK · mirachami.dev

PROFESSIONAL EXPERIENCE (CONTINUED)

The Video Games Studio (VGS)

Jun 2020 – Aug 2022

Game Programmer · Beirut, Lebanon

- Owned gameplay architecture for a published Unity puzzle game, connecting adventure and drawing modes through shared progression and saves, with player-created levels that can be saved and replayed.
- Developed and **shipped a mobile runner**, covering gameplay, difficulty balancing, monetisation and PlayFab competitions; built a tool to run competition cycles and retrieve winners.
- Led programming for a Unity adventure prototype, translating game design into character, ability and interaction systems; built touch controls with the Unity Input System alongside level designers.
- Enabled configurable difficulty, progression and shop content through ScriptableObjects; integrated Unity UI, PlayFab, third-party plugins and backend services.
- Supported technical interviews, onboarded and mentored developers, ran code reviews and planned tasks in Jira and Trello; contributed to game design documents and technical documentation.

TECHNICAL TOOLKIT

Engines & Gameplay:
Unreal Engine 5 · Unity · Godot · Blueprints · Data-Driven Gameplay · ScriptableObjects

Multiplayer & Services:
Server-Authoritative Multiplayer · Replication · RPCs · Dedicated/Listen Servers · Steamworks · InGame · PlayFab · Photon PUN 2 · Node.js · Express · gRPC/Protobuf

Languages:
C++ · C# · GDScript · Python · TypeScript · Rust · JavaScript · Java · C

Applied AI:
LLM Integration · LLM Tool Design · Google Search Grounding · Structured Outputs (JSON Schema) · LLM Output Validation

Development Tools:
Godot Editor Plugins · Git · Perforce · CI · Automated Testing · Build & Release Automation · Performance Profiling

Desktop & Graphics:
React · Tauri · Electron · Three.js · PixiJS · Unity URP · Native API Integration

EDUCATION

MSc Games Development (Programming) · Kingston University London · 2022 – 2023

BSc Computer Science · American University of Beirut · 2017 – 2021

BA Economics · American University of Beirut · 2016 – 2020

MISCELLANEOUS

Languages: English, French and Arabic - native

Favourite games: Clair Obscur: Expedition 33 · Celeste · Split Fiction · The Last of Us · Outer Wilds
