Mira Chami

Software Engineer

London, UK · +44 7495 468016 · miranchami@gmail.com · mirachami.dev

Software engineer building cross-platform desktop applications, backend services and real-time systems, from architecture decisions through CI and release. Recent work spans React/Rust clients, Node.js services, LLM integration and multiplayer game systems.

PROFESSIONAL EXPERIENCE

Tencent

Nov 2023 – Present

Game Tech R&D Engineer (Software & Applied AI) · London, UK

Desktop AI Companion

React, Rust, Tauri

- Led the Electron vs Tauri evaluation with working prototypes comparing performance, bundle size, multi-window behaviour and desktop APIs; recommended Tauri v2 and migrated the core features.
- Designed the client architecture: React UI invoking Rust commands through Tauri; the Rust client sends prompts with session and game context over HTTP and streams responses back via SSE; per-user conversation history persisted across sessions.
- Built a multi-window application (chat, companion, avatar, settings) with shared messaging, overlays, hotkeys and tray access; integrated an external avatar service over gRPC.
- Automated Windows/macOS setup, build, installer and packaging in CI, with Steam isolated behind feature flags; added structured logging and diagnostic panels to trace failures across frontend, Rust and platform layers.

Investigative Game & Applied AI

Node.js, Express, Gemini, Godot

- Built Node.js/Express services for an LLM-backed game: request validation, caching, session restoration, timeouts, cancellation and retries.
- Built a versioned data pipeline with JSON Schema validation, cross-reference checks and a version-comparison viewer; automated data-integrity and UI tests with mocked responses, so flows can be validated without live model calls.

InGame Integration & Multiplayer Demo

UE5, C++, Blueprints

- Integrated and validated InGame, Tencent’s public online services framework, in a UE5/C++ multiplayer demo covering authentication, lobbies, matchmaking, inventory and achievements.
- Supported partner studios by reproducing issues across plugin, backend and UI boundaries; implemented PlayStation 5 support and dedicated-server debugging; modified CI pipelines.

Extraction Game & Applied AI

Godot, GDScript

- Designed server-authoritative networking (Steam P2P, LAN, listen and dedicated servers) with local multi-client testing.
- Built a validated action API between an LLM director service and the game for spawning enemies and rewarding players with items, plus a Godot editor plugin for authoring and testing actions. Profiled procedural generation to identify CPU-bound bottlenecks.

Software Engineer · London, UK · mirachami.dev

PROFESSIONAL EXPERIENCE (CONTINUED)

The Video Games Studio (VGS)

Jun 2020 – Aug 2022

Game Programmer · Beirut, Lebanon

- Integrated PlayFab and third-party backend services across Unity projects, and built a separate application to manage competition cycles and retrieve winner data.
- Owned architecture for a published puzzle game: persistence, progression and replayable player-created content.
- Shipped a mobile runner from first build to store release, covering gameplay, tuning, monetisation and backend integration.
- Led programming for a Unity prototype, from design documents and technical planning to implementation.
- Mentored developers, ran code reviews, supported technical interviews and planned work in Jira and Trello; maintained software architecture documentation.

TECHNICAL TOOLKIT

Languages:
TypeScript · JavaScript · Rust · C++ · C# · Python · GDScript · Java · C

Frontend & Desktop:
React · Tauri · Electron · Native API Integration · Cross-Platform Desktop Development · Multi-Window UI

Backend & Networking:
Node.js · Express · Asynchronous Programming · Caching · HTTP · SSE · gRPC · Protobuf · InGame · PlayFab · Steamworks · Photon PUN 2

Build & Engineering:
CI · Build & Release Automation · Automated Testing · Structured Logging · Performance Profiling · Git · Perforce

Applied AI:
LLM Integration · Google Search Grounding · Structured Outputs (JSON Schema) · LLM Output Validation

Engines & Graphics:
Unreal Engine 5 · Unity · Godot · Blueprints · Unity URP · Three.js · PixiJS

EDUCATION

MSc Games Development (Programming) · Kingston University London · 2022 – 2023

BSc Computer Science · American University of Beirut · 2017 – 2021

BA Economics · American University of Beirut · 2016 – 2020

MISCELLANEOUS

Languages: English, French, Arabic (all native)

Favourite games: Clair Obscur: Expedition 33 · Celeste · Split Fiction · The Last of Us · Outer Wilds
